ENGINEERING YOUR SUCCESS.

Model N°.

T6CCZ . - B22 - B10 - X R 00 - A - 1 00 -

Series - SAE B 2 bolts
Mounting flange J 744 c

One letter can be added to specify special parts in series

Cam ring for "P1" and "P2"
(Delivery at 0 bar & 1500 r.p.m.)

- B03 = 16,2 l/min
- B05 = 25,8 l/min
- B06 = 31,9 l/min
- B08 = 39,6 l/min
- B10 = 51,1 l/min
- B12 = 55,6 l/min
- B14 = 69,0 l/min
- B17 = 87,4 l/min
- B20 = 95,7 l/min
- B22 = 105,4 l/min
- B25 = 118,9 l/min
- B28 = 133,2 l/min
- B31 = 150,0 l/min

Type of shaft

- X = keyed
- V = keyed
- W = keyed

Modifications

Mounting W/ connection variables

	P1 = 1"		S = 3"	
	UNC		Metric	
P2	1"	3/4"	1"	3/4"
Code	00	01	0M	W0

	P1 = 1"		S = 2"1/2	
	UNC		Metric	
P2	1"	3/4"	1"	3/4"
Code	10	11	1M	W1

Seal class

1 = S1 (for mineral oil)

Design letter

Porting combination (see page 3)

Direction of rotation (view on shaft end)

- R = clockwise
- L = counter-clockwise

Internal leakage (typical)

Power loss hydromechanics (typical)

Noise level (typical)

Porting combination

General Description

The T6CCZ pump incorporates DENISON Hydraulics high quality and performances of T6CC series vane pumps mobile application. High maximum permissible shaft loads is particularly well adapted to applications of pump driven by cardan. A double raw ball bearing and a needle bearing double the permissible radial load compare to standard T6CC bearing capability. (see page 4).

Greater Flow

3 to 31 GPM, 10 to 100 ml/rev.

Higher Pressure

275 bar maximum except B28 and B31 cartridge 210 bar.

Wider Speed Range

400 up to 2800 RPM with petroleum based antiwear R & O fluids which are the recommended fluids.(except B25, B28, B31 - 2500 RPM max. speed)

Better Efficiency

Better than 94 % for energy saving.

Mounting Flexibility

Up to 32 positions.

Wider range of acceptable viscosity

2000 cSt max. viscosity (cold start low speed and pressure).
30 cSt optimum (max. life).
10 cSt minimum (full speed and pressure)

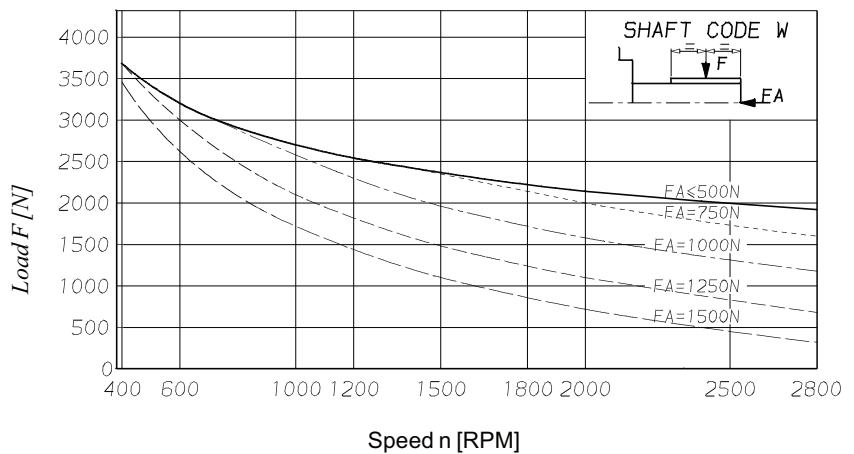

Permissible radial load
Shaft code X

Permissible radial load
Shaft code V

Permissible radial load
Shaft code W

These curves permit to simultaneously check the maximum permissible radial and axial load on the shaft involved. Those load value are determined for 10 000 hours bearing lifetime at operating under Fa and F given to get information for a different lifetime the radial load corrected is.

If Fa is smaller than minimum axial force on the curves then

$$\text{Correct } F = \frac{F \text{ curve}}{3,33 \sqrt{\frac{LH \text{ Required}}{10000}}} \quad LH = \text{Lifetime in hours}$$

If Fa is higher than minimum axial force then F radial load is :

$$\text{Correct } F = \frac{F \text{ curve}}{\sqrt[3]{\frac{LH \text{ Required}}{10000}}}$$
